**DETAILED ACTION**

**1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:**

**(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.**

**2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:**

- 1. Determining the scope and contents of the prior art.**
- 2. Ascertaining the differences between the prior art and the claims at issue.**
- 3. Resolving the level of ordinary skill in the pertinent art.**
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.**

**3. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakahashi et al.**

**Nakahashi et al. teach a method making a transparent acrylic type container containing a plurality of beads and a plurality of**

**bubbles created by a foaming agent and thereafter, the composition is molded into a desired shape and then cured. Applicant's recitation of container in the claims is not accorded weight because applicant has not disclosed what the container is or what it contains. With this reasoning, any transparent acrylic containing beads and bubbles formed into any shape would read on applicant's container. Nakahashi et al. teach making a transparent light diffuser or plate which contains beads and bubbles which would broadly read on applicant's container. With respect to applicant's limitations regarding using colored beads, this would have been obvious to one having ordinary skill in the art at the time the invention was made, as a matter of obvious design choice because the applicant recites no criticality in using colored beads or the specific colors used in the container. The transparent beads used in Nakahashi et al. are visible are distinguishable and would perform much the same as using colored beads absent criticality in showing. It is maintained that Nakahashi et al. as a whole renders applicant's invention obvious.**
